**SUPPORTING STATEMENT**

CEE 432 is being replaced by CEE 534. The following is the supporting statement for CEE 534. This request is to change the course number and title for CEE432 Construction Engineering to CEE534 Construction Engineering, Equipment, and Methods. The course content and bulletin description will remain unchanged. The proposed title change is to more accurately describe the actual content. The proposed numbering change is to accurately reflect the actual status of the course within the undergraduate and graduate curricula.

Undergraduate curriculum. Changes in the CEE undergraduate curriculum in recent years have made CEE 431 Construction Contracting a required course for all undergrads. Undergrads choosing Construction Engineering and Management as a "focus area" must take two of the following three "technical electives": CEE432 Construction Engineering, CEE536 Critical Path Methods, and CEE537 Construction of Buildings.

Graduate curriculum. There are two graduate degrees offered in Construction Engineering and Management: MEng(CE&M) and MSE(CE&M). In both programs, all students must take two of the following seven "graduate civil engineering construction courses": CEE432 Construction Engineering, CEE533 Advanced Construction Systems, CEE537 Construction of Buildings, CEE538 Concrete Construction, CEE547 Soils Engineering and Pavement Systems, CEE553 Advanced Concrete Materials, and CEE631 Construction Decisions Under Uncertainty.

The two original construction courses, CEE431 and CEE432, have evolved to assume different roles in the undergraduate and graduate curricula. Today, CEE431 is a required undergraduate course, and is appropriately a 400 level course. CEE432 has been redesigned so that it is now equivalent in all respects to a 500 level course in difficulty of material, work load, mix of undergrad and grad students taking the course, suitability as an undergraduate technical elective, and suitability as a graduate civil engineering construction course. By retaining its historic 400 level number, CEE432 falls into a second-class status among analogous courses. Undergraduates do not get the appropriate recognition on their academic records for taking a 500 level technical elective. Graduate students are limited in the number of 400 level courses they are allowed to take (12 hours). Taking CEE432 as a 400 level course consumes some of that allowance, when 500 level credit is appropriate.

Are any special resources or facilities required for this course?  Yes  No

**SUPPORTING STATEMENT**

The need for diligent stewardship of our environment has never been as clearly and compellingly documented as it is today. Fortunately, we are also better positioned than ever before to exercise such stewardship, at least in terms of relevant science and technology. This course is about that science and technology, and the manner of its use to preserve, sustain, and improve our environment and its ecosystems. Environmental processes have two dominant characteristics by which they can be commonly identified and quantified. The first is the form and amount of energy available to make them occur, and the second is the speed or rate at which that energy is exercised to effect change. The latter of these common process features depends on many things. It depends upon the numbers (or masses) and the reactivities (or stabilities) of the "energy rich" and "energy poor" partners of a process, and on the pathways available to these partners for effecting their interaction in the context of a given system. In more pointed terms, all environmental processes depend upon: i) the availability of energy; ii) a means for that energy to be exercised in the time frame of interest; and, iii) a system of such spatial and physical characteristics that it allows the reactants to "communicate" for purposes of reaction. These are the three tenets of environmental systems. For successful descriptions and/or designs of such systems, these tenets must be: i) understood on the basis of fundamental principles; ii) represented rigorously in functional form; and, iii) integrated accurately with the functional forms of other pertinent governing principles in appropriate system models. For the complex systems with which we must deal ultimately in practice, empiricism and judgment are required to bridge gaps in absolute knowledge. It is therefore often necessary that we make assumptions in applying the above tenets. If we understand the functions and constraints embodied in the principles involved, our assumptions will be rational.

**Course Syllabus**  
**CEE 500: Environmental Systems and Processes I**  
**Walter J. Weber, Jr.**  
**Fall 2003**

**A. Definitions of Environmental Systems and Processes**

A.1 ENVIRONMENTAL PROCESSES

- A.1.1 Processes and Systems
- A.1.2 Process Categories
- A.1.3 Transformation Processes
- A.1.4 Transport Processes

A.2 ENVIRONMENTAL SYSTEMS

- A.2.1 Natural and Engineered
- A.2.2 Character and Scale
- A.2.3 Measures of Quantity and Quality
- A.2.4 Nature and Dynamics of Change

**B. Process and System Characterization**

B.1 SYSTEM CHARACTERIZATION

- B.1.1 Intuition and Common Sense
- B.1.2 Defining Boundaries
- B.1.3 Water Mass Balances
- B.1.4 Constituent Mass Balances

B.2 PROCESS CHARACTERIZATION

- B.2.1 Transformation Processes
- B.2.2 Transport Processes
- B.2.3 Intuition and More Common Sense
- B.2.4 Processes and Reactors

**C. Process and System Modeling**

C.1 A RATIONAL APPROACH

C.2 MATERIAL BALANCE EQUATIONS

- C.2.1 Control Volumes and Material Balances
  - C.2.2 Point and Integral Forms
  - C.2.3 Configurational Alternatives
-

### C.3 FRAMES OF REFERENCE

C.3.1 Reactions, Processes, and Microscale Transport

C.3.2 Macroscale Transport and Reactors

### C.4 PRINCIPLES, PLATFORMS, PROTOCOLS, AND PHILOSOPHY

C.4.1 Types and Levels of Analysis

C.4.2 Models Based on Material Balance Equations

C.4.3 Initial and Boundary Conditions

C.4.4 Alternative Modeling Approaches

C.4.5 Evaluation Criteria

C.4.6 Philosophical Approach

## D. Fluid Flow and Mass Transport

### D.1 TRANSPORT PROCESSES

D.1.1 Macroscale

D.1.2 Microscale

D.1.3 Transport Modeling

### D.2 ADVECTIVE MASS TRANSPORT

D.2.1 Flow Characterization

D.2.2 Conservation of Mass, Energy, and Momentum

D.2.3 Fluid Mass Balance

D.2.4 Energy and Momentum Balances

D.2.5 Dimensionless Transport Numbers

### D.3 DISPERSIVE MASS TRANSPORT

D.3.1 Dispersion Mechanism and Effects

D.3.2 Dispersion Coefficients and Numbers

## E. Elementary Process Equilibria

### E.1 CONCEPTS

### E.2 WATER AND THE AQUEOUS PHASE

E.2.1 Process Roles

E.2.2 Constituent Character Behaviors

E.2.3 Structure and Properties

### E.3 CHEMICAL STRUCTURE AND REACTIVITY

E.3.1 Electrons and Oxidation States

E.3.2 Reactivity and Reactions

---

E.3.3 Some Important Types of Reactions  
E.4 CHEMICAL STATES AND PROCESS STABILITY

E.4.1 Stability  
E.4.2 Types and Change  
E.4.3 Equilibrium and Steady States

## **F. Process Energy Relationships**

F.1 THERMODYNAMIC LAWS AND FUNCTIONS

F.1.1 Fundamental Laws  
F.1.2 Characteristic Functions  
F.1.3 Free Energy Concepts  
F.1.4 Reaction Free Energy Change  
F.1.5 Reference State Free Energies  
F.1.6 Biologically Mediated Reactions

F.2 THERMODYNAMICS AND REACTIVITY

F.2.1 Reaction Energies and System Composition  
F.2.2 Reaction Energies and Equilibrium Constants  
F.2.3 Reaction Energies and Electrode Potentials  
F.2.4 Reaction Feasibility  
F.2.5 Enthalpy and the Temperature Dependence of Equilibrium

## **G. Elementary Process Rates**

G.1 CONCEPTS

G.1.1 Terms and Conditions  
G.1.2 Measurements  
G.1.3 Mass Law Relationships  
G.1.4 Monomolecular Reactions  
G.1.5 Reaction Orders  
G.1.6 Nonelementary Reactions

G.2 FIRST-ORDER RATE EQUATIONS

G.3 ANALYSIS OF REACTION RATES

G.3.1 Data  
G.3.2 Integral Method of Analysis  
G.3.3 Differential Method of Analysis  
G.3.4 alternative Experimental Methods  
G.3.5 Precautions

## **H. Complex Process Rates**

### H.1 COMPLEX REACTION RATES

- H.1.1 Sequential Reactions
- H.1.2 Parallel Reactions
- H.1.3 Reversible Reactions
- H.1.4 Reaction Rates and Thermodynamics
- H.1.5 Modified First-Order Expressions

### H.2 TEMPERATURE AND ACTIVATION ENERGY

- H.2.1 Arrhenius Equation
- H.2.2 Activation Energy
- H.2.3 Reactive Collisions
- H.2.4 Temperature-Rate Approximations

### H.3 CATALYSIS

- H.3.1 Homogeneous
- H.3.2 Heterogeneous

### H.4 BIOLOGICAL CATALYSIS

- H.4.1 Enzymes
- H.4.2 Michaelis-Menten Model
- H.4.3 Monod Model

## **I. Ideal System Modeling and Design**

### I.1 INTRODUCTION

### I.2 REACTOR CONCEPTS

- I.2.1 Definition
- I.2.2 Flow and Residence Times
- I.2.3 Frame of Reference Reactors

### I.3 IDEAL REACTORS

- I.3.1 Completely Mixed Batch Reactors
- I.3.2 Completely Mixed Flow Reactors
- I.3.3 Plug Flow Reactors
- I.3.4 Comparison of Reactor Performances

### I.4 REACTION RATE MEASUREMENTS IN CMFRs

- I.4.1 Concepts
- I.4.2 Applications

## **J. Hybrid System Modeling and Design**

### J.1 INTRODUCTION

### J.2 SEQUENCING BATCH REACTORS

#### J.2.1 Concept

#### J.2.2 Process Design Options

### J.3 CMFRs IN SERIES

#### J.3.1 Design Relationships

### J.4 REACTORS WITH RECYCLE

#### J.4.1 Recycle Objectives

#### J.4.2 Recycle Equalization

#### J.4.3 PFRs with Flow Recycle

#### J.4.4 CMFRs with Flow Recycle

#### J.4.5 CMFRs with Solids Recycle

## **K. Nonideal System Modeling and Design**

### K.1 NONIDEAL REACTOR BEHAVIOR

### K.2 CHARACTERIZING REACTOR BEHAVIOR

#### K.2.1 Characteristic *C* and *E* Curves

#### K.2.2 Characteristic *F* Curves

### K.3 RESIDENCE TIME DISTRIBUTION ANALYSIS

#### K.3.1 RTDs for Ideal CMFRs

#### K.3.2 RTDs for Ideal PFRs

### K.4 PFR-WITH-DISPERSION REACTOR (PFDR) MODEL

#### K.4.1 An Ideal Model for Nonideal Behavior

#### K.4.2 The Dispersion Number

#### K.4.3 Variance-Dispersion Relationships

#### K.4.4 Design Relationships

Identification of the text to be used in CEE/Che 500 will be "Environmental Systems and Processes; Principles, Modeling, and Design" by W.J. Weber, Jr., Wiley-Interscience, 2001, ISBN 0-471-40518-3.

Course Description Introduction to quantum mechanics of electrons and photons. Electrons in crystals. Metals, semiconductors and insulators. Effective mass, holes, valence and conduction band. Quantum wells, wires and dots. Tunneling effects and applications. Introduction to scattering theory. Charge transport, mobilities in semiconductors. Optical absorption and gain in semiconductors. Physical phenomena discussed in this course will be related to important microelectronic devices.

### SUPPORTING STATEMENT

This is the main course in EECS on physical properties of materials. At present it focuses on semiconductors, the basis of most information technology. However, in view of recent developments in intelligent device technology we would like cover materials like ferroelectrics, piezoelectrics, polymers etc. Students learn about materials that are used not only for the usual chips and communication applications, but also in smart cards, sensors, polarizers, microwave elements etc. The title of the course will change to reflect the new content.

Approved by ECE faculty by email vote in May 2003

Are any special resources or facilities required for this course?

Yes  No

Detail the Special requirements

Action Requested

- New Course
- Modification of Existing Course
- Deletion of Course

Complete the following sections:  
 New Courses - B & C completely  
 Modifications - A modified information, B & C completely  
 Deletions - A & C completely

Date 9/9/2003

Effective Fall 2004
