

UNIVERSITY OF MICHIGAN
College of Engineering
Curriculum Committee Meeting
Tuesday, August 29, 2023

Attending: Achilleas Anastasopoulos, Jack Baker, Robert Bordley, Yavuz Bozer, Chris Fidkowski, Fei Gao, Odest Chad Jenkins, Amir Kamil, Leena Lalwani, Xiaogan Liang, Emmanuelle Marquis, Frank Marsik, Eric Rutherford, Saadet Albayrak Guralp, Roxanne Walker

Support Staff: Mercedes Carmona, Betsy Dodge, Matthew Faunce

Call to Order: 1:33 PM

Adjourned: 2:05 PM

Agenda:

1. Approval of 4.4.2023 Meeting Minutes (Page 9) – **APPROVED**
2. LSA Course Guide added to CARF Summaries Table
 - a. In the CARF Summaries Table (see below), this section is added with the reasoning as if new CoE Course CARFs are interested in being included in the LSA Course Guide, they must be able to meet an LSA requirement to qualify. This section in the table is to monitor if new, deleted, or existing courses are in the LSA Course Guide.
 - b. An inquiry to the LSA Course Guide support staff is waiting for a response. We will update the committee when a response is received.
3. 8.29.2023 Agenda Inconsistencies
 - a. During the lack of access experienced across the university, the last agenda was not accurate in the CARF Summaries for the EECS CARFs Bulk Review. If you would like an updated version of the agenda, please email carmonam@umich.edu.

CARF SUMMARIES

UNIVERSITY OF MICHIGAN
College of Engineering
Curriculum Committee Meeting
Tuesday, April 4, 2023

Attending: Xiaogan Liang (Chair), Robert Bordley, Yavuz Bozer, Andrew DeOrio, Jessy Grizzle, Roman Hryciw, Xianzhe Jia, Leena Lalwani, Kathellen Panagis, Ken Powell, Eric Rutherford, Rachael Schmedlen, Katie Snyder, Roxanne Walker, Steven Yalisove, Won Sik Yang

Support Staff: Stacie Benison, Mercedes Carmona, Betsy Dodge, Matthew Faunce

Call to Order: 1:36pm

Adjourned: 2:07pm

AGENDA

1. Approval of 3.21.2023 Meeting Minutes (Page 2) - **APPROVED**
2. Aerospace Concentration in Robotics – Action Item (Page 4) - **APPROVED**
 - a. Adding a concentration as autonomy has always played a large role in aerospace engineering. There has been high interest from Aerospace students in Robotics.
 - i. Concentration to be implemented for Fall 2023. The requirements listed have been created and adhere to the policy for Engineering Concentrations.
 1. 12+ credits are required, only technical and general electives can be used
 2. Up to three research credits can count towards a concentration with Program Advisor pre-approval
 3. Courses must be letter graded and cannot be taken for Pass/Fail
 4. Not available to students pursuing dual degrees or SUGS masters in the same area per policy for concentrations
 5. C- or better for all courses and GPA must be 2.0 and above
 - ii. 1 linear algebra course (Choices in ROB, AERO, MATH), 1 Core AERO Robotics course, and 2 more courses from Robotics, Dynamics and Control, and/or Math, Computation, Machine Learning, and Data-Drive Modeling.
 - b. A question was raised as to why SUGS students cannot take this concentration and was explained that the concentration is adhering to the Engineering Concentration policy and Rackham Rules, which excludes SUGS students.
 - c. Letter grading will need to be reviewed for a requirement as S and U courses can fall into this category and the concentration may not want these courses included.
 - i. Suggestion to revise grading requirement as Letter Grading (A-E) if they wish not to include S and U courses.
 - d. Ken states he will follow up and double check the concentration policy to make sure everything is thorough with the questions raised.

Describe how this course fits with the degree requirements:

This course satisfies the following degree requirements:

UG EE: Upper Level EE Elective

UG CE: EECS Elective

UG CS and UG DS: Flex. Tech. Elec.

ECE graduate programs: This course counts as a Major Area course for Solid State and Nanotechnology Area. For the Power & Energy Area, it can count as a Major Area course after approval by an advisor.

Special resources of facilities required for this course:

Course project use Synopsys Atlas and Silvaco TCAD software provided by CAEN

Supporting statement:

This course has been taught five times previously. The course draws graduate students from multiple sub-disciplines in ECE (power, VLSI/IC, solid state, embedded systems, and MEMS) as well as from MSE, Chem Eng, and other departments.

Past offerings:

Fall 2014: 20 students

Fall 2016: 9 students

Fall 2018: 15 students

Fall 2020: 22 students

Fall 2022: 48 students

EECS 598 Section 005, Fall 2022
Power Semiconductor Devices

- Instructor: Prof. Becky Peterson, blpeters@umich.edu
- Course Website: The course will be run through the Canvas site “EECS 598 005 FA 2022”. Recorded lectures, pdfs of lecture notes, weekly quizzes, homework assignments, announcements and grades, and other materials will be posted on Canvas. All course events will be listed on the Canvas Calendar.
- Announcements: I use Canvas Announcements to communicate with the class. So that you do not miss important information, I encourage you to “Enable Notification” and select “Notify immediately” for *Announcement*. Instructions are [here](#).
- Lectures: Lectures are **Mondays and Wednesdays 1:30-3:00pm in 1003 EECS**. Unless you are ill or have extenuating circumstances, the expectation is that you will attend most lectures in person. Lecture note pdfs will be posted before each class. Lecture recordings will be posted after class. The recordings are intended for review, or for watching if you must miss class.
- Discussion Sections: Discussions are held **Fridays at 1:30-2:30pm or 2:30-3:30pm in 104 EWRE**. Attendance and participation is required. Discussions will be a mix of review, presentation of details regarding the homework assignments, and training and practice sessions with simulation software. In addition, I will address your questions about the course material. You may attend either session regardless of your registration; the two sessions will be identical. Unless you are ill or there are extenuating circumstances, you are expected to attend in person.
- Illness and Mask Policy: If you are ill, please stay home and, insofar as your health allows, join lectures, discussion and/or office hours via Zoom. If you will join a Discussion by Zoom, please email me in advance so I can note your attendance. The class zoom link is <https://umich.zoom.us/j/96100936889>, Meeting ID: 961 0093 6889, Passcode: powersemi
- To protect one another, during class and office hours the use of high-quality masks are recommended but not required. Masks and COVID rapid tests are available free (while supplies last) to anyone with an MCard at any U-M CSTP testing location, including Pierpont.
- Office Hours: Office Hours will be held **Mondays at 3-4pm in 2411 EECS** and **Wednesdays 12:15-1:15pm in 2311 EECS**. Office hours are optional.
- Questions: We will use Piazza for course-related questions. Sign up for Piazza here: <https://piazza.com/umich/fall2022/eecs598005fa2022>. For informational requests (clarifying a typo, question about an assignment), please make your posts open so that all students can receive the same information. If you have a matter requiring 1-1 discussion, please send email to Prof. Peterson with “EECS 598” in the subject line.

- Prerequisites: This course assumes a working knowledge of introductory semiconductor physics and devices. Resources for reviewing these concepts are given in the Supplemental Textbooks section below. The pre-requisite is EECS 320 (Introduction to Semiconductor Devices) or equivalent, graduate standing, or permission of the instructor. If you would like access to my EECS 320 Canvas site from a previous semester (with recorded lectures), please let me know.
- Main Textbook: B. J. Baliga, *Fundamentals of Power Semiconductor Devices, Second Edition*, Springer, 2019, ISBN: 978-3-319-93988-9. Available for pdf download, e-pub online access, or you can purchase a *MyCopy Softcover* (printed version) for \$39.99 from Springer. To access, go to this page and click on “Available Online”: <https://search.lib.umich.edu/catalog/record/99187265941106381>
A hardcopy is also on reserve in AAEL.
- Supplemental Textbooks (Chapter 7 only) B. El-Kareh and L. N. Hutter, *Silicon Analog Components*, Springer International Publishing, 2020, ISBN 978-3-030-15085-3. Available for pdf download, e-pub online access, or you can purchase *MyCopy Softcover* (printed) for \$39.99 from Springer. To access, go here and click on “Available Online”: <https://search.lib.umich.edu/catalog/record/99187274838306381>
- (Chapter 1 only) Farid Medjdoub and Krzysztof Iniewski, Eds., *Gallium nitride (GaN) physics, devices and technology*, CRC Press, 2015, ISBN 9781482220032. Available for download here: <https://search.lib.umich.edu/catalog/record/99187341914506381>
- For those who wish to review semiconductor physics:
- Robert F. Pierret, *Semiconductor device fundamentals*, Addison-Wesley, Reading, Mass., 1996, ISBN 0201543931 (a great book, but not available online). A hardcopy is on reserve in AAEL.
 - Donald A. Neamen, *Semiconductor physics and devices: basic principles, 3rd ed.*, McGraw-Hill, Boston, Mass., 2003, <https://search.lib.umich.edu/catalog/record/990085824500106381> (also a very good book; available online)
 - S. M. Sze, *Physics of semiconductor devices*, Wiley, New York, 1981 or later edition, (good for reference, not as good for learning) <https://onlinelibrary.wiley.com/doi/book/10.1002/0470068329>
- Online textbook access: Note: you must be on campus, or use VPN, or use the proxy to download the books. For information on U-M VPN: <https://its.umich.edu/enterprise/wifi-networks/vpn/getting-started>. To use the proxy, see the instructions here <https://www.lib.umich.edu/find-borrow-request/access-online-resources/remote-access/using-browser-bookmark>. The proxy is useful for downloading library and journal documents when off campus.
- If you have problems accessing the textbooks, please contact the Engineering Librarian, Paul Grochowski at grocho@umich.edu.

Simulation Software: We will use CAEN-based device simulation softwares Silvaco and Sentaurus. I will provide tutorials during Discussion sections.

All U-M students have access to these softwares via on-campus CAEN computer labs or Linux Remote Login Service. The remote service is restricted to those whose primary residence is within a 50-mile radius of North Campus. See <https://caen.engin.umich.edu/software/licensing/access-to-synopsys-tools/> for details.

Grading: Grades for this course will be posted in Canvas, and will be based on:

- Homeworks (five, each 5.6%) 28%
- Weekly Lecture Quizzes: (12 each @ 1%) 12%
- Discussion Attendance and Participation (12 each @ 0.5%) 6%
- Simulation Project 1 18%
- Simulation Project 2 18%
- Presentation 18%

Letter grades are assigned based on final course numerical grades.

> 90.0% will always be some sort of A (A-, A, or A+)

> 80.0% will always be some sort of B (B-, B, or B+) or better

> 70.0% will always be some sort of C (C-, C, or C+) or better

All students are graded on the same scale and the course is not curved: if everyone gets above a 90%, everyone gets an A-/A/A+. I may lower the % breakpoint for the entire class (i.e. 87% might be the A/B breakpoint in one semester), i.e. grades can only go “up” from what is listed above.

Assignment details and due dates will be posted on Canvas during the semester. See the Course Outline for the general scheme. There are no exams.

Grades on individual assignments will be posted via Canvas. For homework and simulation projects, graded assignments will be returned privately online. If you have questions about the grading of a specific assignment, you must contact me within two weeks of that grade posting in Canvas.

Homework: The purpose of homework is to learn. I strongly encourage you to discuss homework with other students and learn from each other. For many of the assignments, I will provide spreadsheets to streamline analytical calculations so that problems can focus on device analysis and design. Homework is turned in and graded individually, and the work you turn in must be your own.

Lecture Quizzes: To encourage you to engage fully with the lectures and keep up with the material, each week there will be a short quiz on Canvas to confirm your basic understanding of the material covered in the lectures that week. The quizzes will be open book and should take < 5 min if you have engaged with the lectures. The quiz on Monday and Wednesday’s lectures will be posted by Wednesday 6:00pm, and must be completed before the following Sunday at 11:59pm.

- Simulation Projects: There will be two projects on power device simulation using the commercial platforms Silvaco Atlas and Synopsys Sentaurus. Projects are done individually by each student. In each project, you will begin with a vendor-provided device example and then explore and explain its operation by modifying the simulation. Each student will write a project report, which will be graded. Detailed tutorials will be given on the software packages during Discussion Sections; no prior knowledge is assumed.
- Presentations: Presentations will occur at the end of the semester during scheduled lecture periods. The 15-min presentations will be done by groups of three, and you may choose your own group. Each group will select a topic related to the course. This could be a current research area, a characterization technique, or a new commercial class of devices. Each group will write a two-page abstract describing the topic; I will respond to approve the topic and give feedback. During the presentations, each person in the group must speak. Presentations will be followed by student Q & A. The grade will be based on the abstract, the presentation slides, the oral presentation, your response to peer questions and your questions on others' presentations. A detailed assignment and the schedule of presentations will be announced via Canvas.
- Late Policy: In fairness to all students, late assignments receive a score of zero, with the following exception: I allow one 24-hour extension on Homework per semester per student. Please email me BEFORE the due date to request this exception, and I will reply to confirm. Other assignments are not eligible for this exception. If there is an extenuating circumstance that goes beyond the above, please contact me to discuss as far in advance as possible.
- Assignment Submission Procedure: All graded work this semester will be submitted online. For Homework and Simulation projects, pdf format with total document size < 20 MB is required. It is your responsibility to make the pdf readable and a reasonable size. It is easy to make a scan of a physical document using most smartphones. Once scanned, you can then upload to Canvas or send it to yourself via email for later submission. iOS devices have a document scanner function built into the **Notes app**, video here: **iPhone** (2:46). Android devices can scan documents directly using the **Google Drive app**, video here: **Android** (2:15)
- Honor Code Statement: All work in this class shall be in accordance with the College of Engineering's Honor Code (<https://elc.engin.umich.edu/honor-council/>). Specifically, *"It is a violation of the Honor Code for students to submit, as their own, work that is not the result of their own labor and thoughts. Work which includes material derived in any way from the efforts of another author, either by direct quotation or paraphrasing, should be fully and properly documented. To avoid plagiarism, it is necessary to cite all sources of both ideas and direct quotations, including those found on the internet. The basic principle is to provide enough information so that the original source of material can be located."*
By turning in assignments for this course, you are automatically confirming that, as per the Honor Code: "[you] have neither given nor received unauthorized aid on this [assignment], nor have [you] concealed any violations of the Honor Code."

Religious Holidays or other conflicts If a course requirement or due date falls on a religious holiday that you observe, or another obligation (e.g. conference attendance), please let me know at least two weeks in advance, so we can determine how to accommodate the conflict, [per University guidance](#).

Accommodations for Students with Disabilities: If you need an accommodation, please let me know as early as possible in the semester. If you already have an Accommodations Letter or a Verified Individualized Services and Accommodations (VISA) form, please provide a signed copy. If you do not have one, please work with the Services for Students with Disabilities (SSD, 734-763-3000; <http://ssd.umich.edu>) office. Any information you provide to me and to SSD will be treated as private and confidential.

Statement on Recordings: Course lectures and discussions may be audio/video recorded and made available to other students in this course. As part of your participation in this course, you may be recorded. If you do not wish to be recorded, please contact Prof. Peterson the first week of class to discuss alternative arrangements.

Students may not record or distribute any class activity without written permission from the instructor, except as necessary as part of approved accommodations for students with disabilities. Any approved recordings may only be used for the student's own private use.

My Practices for Faculty/ Student Interactions It is my goal to create a safe environment that is conducive to productive learning. I am committed to creating a learning environment that is free of [Prohibited Conduct](#), including gender-based and sexual harassment, sexual violence, retaliation, discrimination and intimidation. To accomplish this, I pledge to:

- **Conduct office hour and meetings only in University venues, with doors open.** Students who wish to have confidential conversations with me may schedule a private meeting via Zoom or may ask to have a closed-door meeting. Requests for closed-door meetings must be made by you in writing (email), and can be sent on the spot.
- **Document all pre-scheduled meetings (at times outside LEC/DIS/Office Hours) with students via Google Calendar and/or university email.** If students drop by for an informal meeting, no documentation will be provided.
- **Conduct all individual communications using University-provided platforms such as email, Canvas, Slack, Piazza, and so on.**

You should be aware that as Director of the Lurie Nanofabrication Facility, I am an "Individual with Reporting Obligation" (IRO). People in certain U-M roles are considered IROs and are required to report suspected [Prohibited Conduct](#) to the Equity, Civil Rights and Title IX Office at the University of Michigan. This means that if you tell me about suspected Prohibited Conduct, I must report it. If you want to talk with someone who is not an IRO, please see the resource list below.

Other Resources
For Students

Michigan Engineering C.A.R.E. Center, <https://care.engin.umich.edu/> is a central hub to help you find support for issues both inside and outside the classroom. The bottom of their website contains key phone numbers. Their homepage also contains a link to submit a concern report, which anyone can complete if they are concerned about the well-being of a student.

Counseling and Psychological Services ([CAPS](#)) (24 hour line) 734-764-8312
Provides a variety of services include tele-counseling, personal counseling, crisis support, virtual outreach, and referrals to community providers.

Other important numbers and links

- Call 911 for life-threatening emergencies. Dialing 911 from your cell phone will connect you with the local emergency dispatch. If you are on-campus, tell them you are calling from U-M Ann Arbor. Dialing 911 from a campus phone will dial University police dispatch.
- UM Police Department (24 hour line) 734-763-1131
- Ann Arbor Police Department 734-994-2911 (non-emergency dispatch)
- U-M Psychiatric Emergency (24 hour line) 734-996-4747
- Sexual Assault Prevention and Awareness Center ([SAPAC](#)) (24 hour emergency) 734-936-3333; (non-emergency) 734-764-7771
- [Avalon Healing Center](#) (24 hour line) 313-474-SAFE, for immediate crisis intervention, advocacy and medical-forensic healthcare for survivors of sexual violence of all ages
- If a situation involves potential sexual and gender-based misconduct or discrimination, please fill out an Equity, Civil Rights, and Title IX Office [incident report form](#). The University strongly encourages the prompt reporting of these types of allegations. For additional information, including confidential and non-confidential resources, please visit this [website](#).
- For situations involving student conflicts or alleged violations of the [student statement of responsibilities](#), please visit the [Office of Student Conflict Resolution report form](#).

Fall 2018 Instructor Report of EECS 598-002: Special Topics for Becky Peterson

Project Title: **Central Campus Fall 2018 Evaluation**

Course Audience: **15**
Responses Received: **6**
Response Ratio: **40.0%**

Report Comments

This report is a summary that tabulates all quantitative ratings on a single page. Ratings are from the Fall 2018 teaching evaluations of EECS 598-002: Special Topics.

Prepared by: **Office of the Registrar**
Creation Date: **Mon, Dec 31, 2018**

Responses to the University-wide questions about the course:

	SA	A	N	D	SD	N/A	Your Median	University-Wide Median	School/College Median
This course advanced my understanding of the subject matter.	5	1	0	0	0	0	4.9	4.5	4.7
My interest in the subject has increased because of this course.	5	1	0	0	0	0	4.9	4.1	4.6
I knew what was expected of me in this course.	5	0	1	0	0	0	4.9	4.4	4.6
Overall, this was an excellent course.	5	1	0	0	0	0	4.9	4.2	4.6
I had a strong desire to take this course.	5	1	0	0	0	0	4.9	4.0	4.5
As compared with other courses of equal credit, the workload for this course was... (SA=Much Lighter to SD=Much Heavier)	1	0	1	3	1	0	2.2	3.0	3.0

Responses to the University-wide questions about the instructor:

	SA	A	N	D	SD	N/A	Your Median	University-Wide Median	School/College Median
Overall, Becky Peterson was an excellent teacher.	6	0	0	0	0	0	5.0	4.5	4.7
Becky Peterson seemed well prepared for class meetings.	6	0	0	0	0	0	5.0	4.8	4.8
Becky Peterson explained material clearly.	5	1	0	0	0	0	4.9	4.6	4.7
Becky Peterson treated students with respect.	6	0	0	0	0	0	5.0	4.8	4.9

Responses to additional questions about the course:

	SA	A	N	D	SD	N/A	Your Median	University-Wide Median
Prerequisites provided adequate preparation for this course. (Q61)	4	0	1	0	0	1	4.9	4.3
The textbook made a valuable contribution to the course. (Q340)	3	2	1	0	0	0	4.5	3.7
I developed confidence in my abilities as an engineer.	4	2	0	0	0	0	4.8	4.1
I developed the ability to solve real world engineering problems.	4	2	0	0	0	0	4.8	4.1

The medians are calculated from Fall 2018 data. University-wide medians are based on all UM classes in which an item was used. The school/college medians in this report are based on classes that are graduate level with enrollment of 1 to 15 in College of Engineering.

Describe how this course fits with the degree requirements:Special resources of facilities required for this course:Supporting statement:

In discussion with the CSE Undergraduate Curriculum Committee and the faculty member who developed the class, we came to the conclusion that there is substantial overlap between 453 and 445 in terms of methods taught. While the classes are geared for a different student audience in terms of mathematical background and type of applications discussed, a student who has taken one of these classes will not gain sufficient added value from the other class to justify awarding credits.

EECS 451 Digital Signal Processing was converted to EECS 351 in the 2014-2015 academic year because undergraduate students interested in signal processing wanted more and earlier opportunities to take courses on the subject. This cleared space at the 400-level for new relevant courses, and 453 is filling that gap. There is an extremely high demand for machine learning in ECE undergraduate students, and graduate students from other departments who find themselves unprepared for EECS 545/553 will find an excellent introduction in EECS 453.

Describe how this course fits with the degree requirements:

Tech Elective

Special resources of facilities required for this course:Supporting statement:

At the time EECS 461 was started the CE degree program was still being defined and the signals and systems curriculum was in a state of flux. It made sense then to have alternate paths into the class. As it turned out EECS 216 is required for both EE and CE majors and over the years EECS 461 has grown to rely heavily on that material. A student having only EECS 373 would not have the correct background to succeed. This has never been major problem, but there are occasionally CS students who take EECS 373 and there are also CE students who postpone taking EECS 216 until their last semester and might therefore take EECS 373. This does not happen very often, but it would be cleaner if the prerequisite were adjusted to fit the way we actually teach the class.

Describe how this course fits with the degree requirements:

Degree Requirement

Special resources of facilities required for this course:

All the software needed for learning how to use solvers (**e.g., Python and Pyomo**) for optimizing linear (integer) programming models taught by the course are available in any CAEN machine. The students have access to all the required software even outside the current lab space.

Supporting statement:

Cognizant Faculty & the Undergrad Program Committee have agreed after various discussions that ROB 101 should be treated as equivalent to Math 214 as an acceptable prerequisite for IOE 310. Many other Departments have already accepted this exception.

Describe how this course fits with the degree requirements:

This course is part of the required 33 credits of the IOE core requirements.

Special resources of facilities required for this course:Supporting statement:

The "enforced" Notice is currently in the "Notes" on Wolverine Access as a written notice to the interested students, because we were told in the past that "accompanied by..." cannot be enforced and thus so listed. Now it appears it can be so listed (though still not enforced by the system). It is better to formally list it that way.

DEPARTMENTAL/COLLEGE USE ONLY

Current:**Requested:**Course Description

Engineering students will explore the dynamics of turning an innovative idea into a commercial venture in an increasingly global economy. Creating a business plan originating in an international setting will: challenge students to innovate; manage risk, stress and failure; confront ethical problems: question cultural assumptions; and closely simulate the realities of life as an entrepreneur.

Describe how this course fits with the degree requirements:

This course is part of the required 33 credits of the IOE core requirements.

Supporting statement:

As long as students have IOE 366 and IOE 316 completed beforehand, then IOE 474 can be preceded or accompanied by IOE 373. IOE 474 does not require the use or knowledge of Python which is the coding language taught in IOE 373. Discrete event simulation software (ProModel) is taught and used in IOE 474

Describe how this course fits with the degree requirements:

Culmination course required for all students in ROB BSE program

Special resources of facilities required for this course:Supporting statement:

Need a way to assess a student's ability to synthesize all of the content from their courses.

Course Objectives

Upon completion of this course, students should be able to:

1. Solve an open-ended robotics design problem including considerations of performance, standards/stakeholder criteria, and societal impact. The problem must provide opportunities for creative robot design that leverages fundamental concepts from: front-end design of robots with humans in the loop, robot design principles and methodologies, robot learning, robot control, robot perception, fundamental analysis, and proof-of-concept iterative prototyping. Each student team works on a different project and everyone participates in project proposal development, reporting, and design presentations.
2. Apply a robot design, prototype, and analysis process appropriate to the robotic problem at hand, including unstructured creativity as part of a structured robot design problem.
3. Generate and evaluate robot design concepts after gaining a sound understanding of the problem background and incorporating concepts learned through ROB 250 and 350, as well as the ROB 300-level courses in perception, reasoning, and acting, designing and building robots, sensors and signals, and robot operating systems.

Course Outcomes

As a result of this course, students should be able to achieve the following:

1. Given a qualitative and open-ended "real-world" robotics design problem, suggest a solution based on robot design principles and quantitative analysis methods while considering societal implications of the solution.
2. Learn to work effectively in engineering teams to resolve conflict and meet quantitative engineering objectives established during the project. Learn to communicate effectively with peers, project sponsors, key stakeholders, advisors, and/or mentors.
3. Learn to consider unstructured creativity as a natural part of a structured design process and to systematically generate concepts using methods such as brainstorming and decomposition.
4. Learn to make appropriate assumptions and exercise engineering judgment in solving an open-ended problem.
5. Manage and plan large design projects using time management tools, and be able to handle uncertain and incomplete information effectively to meet project goals.
6. Learn to clearly request and exchange quantitative information, and to communicate project results, to audiences of varying expertise levels.
7. Learn patent and literature search methods, benchmarking, and other general forms of background independent learning.
8. Integrate past course material to advance basic system concepts to a prototyping level, providing support for all design decisions by defensible engineering analysis and reasoning.

ROB 450 – Senior Capstone

Course Structure

- 10 learning modules with quizzes and in-class activities (all students, all projects)
- Independent Team Project in Group of 4-5, with design reviews & peer evaluations
- Teamwork and Meetings with Instructors

Course Description

The primary goal of this course is to challenge students to synthesize the knowledge acquired through their Robotics undergraduate courses at U-M and, using a systematic and iterative design and analysis process, apply it to solving a real, open-ended Robotics problem.

Learning Objectives

Apply knowledge from previous courses towards the design of a solution for a real-world problem. In particular, this course will provide the following learning objectives:

- Navigating group dynamics that incorporate concepts regarding diversity, equity, and inclusion
- Presenting technical concepts to different audience members from various stakeholder groups
- Iterating with sponsors and key stakeholders to identify specific project deliverables, and determine an appropriate validation process
- Communication: scope, presentations, interviews / sponsor interactions
- Develop and apply robotic design principles that consider important societal implications such as ethical, environmental, and safety critical design requirements
- Applying important technical and problem-solving skills learned throughout the undergraduate curriculum to solve a real-world problem

Prerequisites

TCHCLCM 350, and at least one of ROB 310, 311, 320, 330 or 340. Authorization to use the ROB undergraduate machine shop.

Required Textbook and Materials

No textbook is required. All required readings will be posted/linked in Canvas. Students will also need to collect and synthesize information from suggested references, research, prior Robotics coursework, and stakeholders or subject matter experts. Safety glasses are required for build and test activities.

Course Objectives

Upon completion of this course, students should be able to:

1. Solve an open-ended robotics design problem including considerations of performance, standards/stakeholder criteria, and societal impact. The problem must provide opportunities for creative robot design that leverages fundamental concepts from: front-end design of

robots with humans in the loop, robot design principles and methodologies, robot learning, robot control, robot perception, fundamental analysis, and proof-of-concept iterative prototyping. Each student team works on a different project and everyone participates in project proposal development, reporting, and design presentations.

2. Apply a robot design, prototype, and analysis process appropriate to the robotic problem at hand, including unstructured creativity as part of a structured robot design problem.
3. Generate and evaluate robot design concepts after gaining a sound understanding of the problem background and incorporating concepts learned through ROB 204 and 350, as well as the ROB 300-level courses in perception, reasoning, and acting, designing and building robots, sensors and signals, and robot operating systems.

Course Outcomes

As a result of this course, students should be able to achieve the following:

1. Given a qualitative and open-ended "real-world" robotics design problem, suggest a solution based on robot design principles and quantitative analysis methods while considering societal implications of the solution.
2. Learn to work effectively in engineering teams to resolve conflict and meet quantitative engineering objectives established during the project. Learn to communicate effectively with peers, project sponsors, key stakeholders, advisors, and/or mentors.
3. Learn to consider unstructured creativity as a natural part of a structured design process and to systematically generate concepts using methods such as brainstorming and decomposition.
4. Learn to make appropriate assumptions and exercise engineering judgment in solving an open-ended problem.
5. Manage and plan large design projects using time management tools, and be able to handle uncertain and incomplete information effectively to meet project goals.
6. Learn to clearly request and exchange quantitative information, and to communicate project results, to audiences of varying expertise levels.
7. Learn patent and literature search methods, benchmarking, and other general forms of background independent learning.
8. Integrate past course material to advance basic system concepts to a prototyping level, providing support for all design decisions by defensible engineering analysis and reasoning.

Course Evaluation Policy

Class participation evaluated through:	20%
<ul style="list-style-type: none"> • Quizzes • in-class discussions • active participation in class activities 	
Team project evaluated through:	70%
<ul style="list-style-type: none"> • project proposal • project written reports • project oral presentations 	
Peer/self evaluation	10%

Course Syllabus

	Course Topic / Task	Due date	Deliverable
LM	Design process overview	week 1	quiz / class activity
LM	Societal implications of robot design	week 2	quiz / class activity
LM	Problem definition + stakeholder engagement	week 3	quiz / class activity
PT	Project Proposal: problem defn, requirements, stakeholders, initial prototype	week 4	oral presentation
LM	Concept exploration / selection	week 5	quiz / class activity
LM	Robot design and build principles	week 6	quiz / class activity
LM	Bio-inspired robot design	week 7	quiz / class activity
PT	Design Review: project start through iterative prototypes	week 8	oral presentation + written report
LM	Robot learning	week 9	quiz / class activity
LM	Robot perception	week 10	quiz / class activity
LM	Robot control	week 11	quiz / class activity
LM	Engineering Analysis	week 12	quiz / class activity
PT	Design Review: interactive prototypes + V&V	week 13	oral presentation + written report
PT	Design expo - final prototype demonstration	week 14	oral presentation
PT	Final report	week 15	written report
PT	Documentation / final files to sponsor	week 15	files + prototypes
LM = learning module			
PT = project task

DEPARTMENTAL/COLLEGE USE ONLY

Current:**Requested:**Course Description

Introduction to computational methods for identifying patterns and outliers in large data sets. Topics include the singular and eigenvalue decomposition, independent component analysis, graph analysis, clustering, linear, regularized, sparse and non-linear model fitting, deep, convolutional and recurrent neural networks. Students program methods; lectures and labs emphasize computational thinking and reasoning.

Describe how this course fits with the degree requirements:Special resources of facilities required for this course:

No special equipment or facilities except a classroom with table seating — students program on their computers in the lab component of in-class time.

Supporting statement:

The EECS department is moving most 500-level and above courses to separate CSE and ECE subject codes to free up course numbers, and to better reflect which division is the home for each course.

Describe how this course fits with the degree requirements:

Tech Elective

Special resources of facilities required for this course:

Laboratory time in the LNF is requested as part of the course. In Fall 2015, nanofabrication and characterization tools for plasmonics research were surveyed. This included SEM, E-beam, Nano-imprint lithography and an LNF tour. These topics complemented the existing lecture portions of the course. Student surveys unanimously supported laboratory time in the future. Further, the student backgrounds are diverse (ECE, chemistry, chemical engineering, physics, mechanical engineering, biomedical engineering). Thus, for many students, it was the first time to see the LNF and the facilities and equipment available for plasmonics research according to surveys.

Supporting statement:

The EECS department is moving most 500-level and above courses to separate CSE and ECE subject codes to free up course numbers, and to better reflect which division is the home for each course.

Contact hours (recitation)Contact hours (lab)Course Description

This course covers the fundamentals of electric power system markets, including the economic principles they are based upon. It also covers the optimization methods required to solve planning and operational problems including economic dispatch, optimal power flow, and unit commitment. Problems are placed in the context of real electricity markets.

Theoretical topics include subspaces, engenvalue and singular value decomposition, projection theorem, constrained, regularized and unconstrained least squares techniques and iterative algorithms. Applications such as image deblurring, ranking of webpages, image segmentation and compression, social networks, circuit analysis, recommender systems and handwritten digit recognition. Applications and theory are covered in greater depth than in EECS 453.

DEPARTMENTAL/COLLEGE USE ONLY

Current:Course Description

System architectures. Data link control: error correction, protocol analysis, framing. Message delay: Markov processes, queuing, delays in statistical multiplexing, multiple users with reservations, limited service, priorities. Network delay: Kleinrock independence, reversibility, traffic flows, throughput analysis, Jackson networks. Multiple access networks: ALOHA and splitting protocols, carrier sensing, multi-access reservations.

DEPARTMENTAL/COLLEGE USE ONLY

Current:Course Description

Introduction to analysis and design of hybrid systems and hybrid control systems. Hybrid system modeling formalisms, specifications (automata theory, temporal logics), verification (barrier certificates, reachable sets, abstraction-based methods) and control synthesis. Stability of switched/hybrid systems. Applications of convex geometry and convex optimization in control. Model-predictive control of hybrid systems.

Describe how this course fits with the degree requirements:

Tech Elective

Special resources of facilities required for this course:

Two lectures are held in CAEN computer labs to introduce students to hybrid system verification/synthesis software. All of the software used is open-source and preinstalled to CAEN machines by DCO within a course module.

Supporting statement:

The EECS department is moving most 500-level and above courses to separate CSE and ECE subject codes to free up course numbers, and to better reflect which division is the home for each course.

DEPARTMENTAL/COLLEGE USE ONLY

Current:Course Description

Exploration of advanced topics in Artificial Intelligence, intended as preparation for research in the field. Emphasizes research methods and practice, through explicit instruction, analysis of current literature, and a term project devoted to replicating published findings. Coursework comprises extensive reading, research and writing assignments, presentations, quizzes, and the replication project.

Contact hours (recitation)Contact hours (lab)**Requested:**Course Description

Exploration of advanced topics in Artificial Intelligence, intended as preparation for research in the field. Emphasizes research methods and practice, through explicit instruction, analysis of current literature, and a term project devoted to replicating published findings. Coursework comprises extensive reading, research and writing assignments, presentations, quizzes, and the replication project.
